

## **Forklift Training School Markham**

Forklift Training School Markham - The Importance Of A Forklift Training School When Using The Machine - CSA and OSHA establish criteria for forklift safety training which meets current standards and regulations. Anyone planning to operate a forklift is needed to successfully complete safety training before using whichever kind of forklift. The accredited Forklift Operator Training Program is designed to provide individuals training with the practical skills and information to become a forklift operator.

There are forklift operation safety rules which must be followed pertaining to pre-shift checks, and regulations for loading and lifting.

An inspection checklist should be completed and given to the supervising authority prior to starting a shift. When a maintenance problem is uncovered, the utilization of the specific equipment must be stopped until the problem has been addressed. To be able to indicate the machine is out of order, the keys must be removed from the ignition and a warning tag placed in a visible location.

Safety regulations for loading would comprise checking the load rating capacity on the forklift to know how much the equipment can handle. When starting the machinery, the forks should be in the down position. Remember that there is a loss of approximately one hundred pounds carrying capacity for every one inch further away from the carriage which the load is carried.

Lifting should begin with the driver moving to a stopped position around three inches from the load. The mast should then be leveled until it has reached a right angle with the load. Raise the forks to one inch below the slot on the pallet and drive forward. After that lift forks four inches. Tilt back the load to secure it for moving. Drive the lift in reverse if the load obscures frontal vision. Check behind and honk in order to alert other staff. Do not allow forks to drag on the ground.
